

ZIVA

FITNESS NATION

Case Study: Ziva

EUROPE'S BIGGEST FITNESS COMMUNITY

Completed

About the project:

Sport, Healthcare

Web, Mobile

Germany

1.5 year

1 QA engineer

Sergey S

Client

PM of Ziva (former Lift&Squat) Bohdan wanted to connect QA engineers at the beginning of development to be sure that the product won't have problems after each release. The QA process implementation was the main goal.

Flow

The platform features Web and Mobile apps. Each user can create an account there and use it in a similar way to Facebook: post, add friends, participate in competitions, talk to GYM accounts and coaches.

Team

It was a distributed team. All members were from Europe: four Developers, Scrum Master, PM, and Designer.

Requirements

Creating and implementation of the QA process.
Functional/Logic/Performance testing.
API automation testing.
Regression testing.
Android and IOS testing.
Compatibility testing.
Browser testing.
Creating test documentation.
Reporting statuses to the team.

The process of choosing candidates

The main requirements for a QA engineer were a fast and clear response, structured reports, and experience in Agile development. The client interviewed seven candidates. Our QA engineer completed a test task in the best way and was selected as QA Engineer. We were selected as the QA Agency and one tester worked on this project: Sergey Smaglyuk [Senior QA Engineer].

What was done?

The QA process was implemented. Regression tests were written and passed before each release (web and mobile). Acceptance tests were created. API automation tests were performed. All needed types of browsers were covered with tests. Test documentation was created.

Results:

0 major, critical,
blocker issues
in production

The first version
of the application
was released

1000+
tickets filed

The client's key requirement was achieved: no release showed major issues on production; user's feedback was positive.

Client Feedback

"UTOR are a very good QAEs that can easily switch between the back-end testing and perform automation and front end on web and mobile. Will happily work with them in the future."

BOGDAN BOROS
PM OF ZIVA
(FORMER LIFT&SQUAT)
